Django Class Based Views

… or an attempt at thereof …

Rails vs Django

I am a software developer. I built apps with Rails and Django thus far:

- both have online docs, though I found the Django ones less straightforward
- both have ORM's to help with performing database operations
- Rails online ecosystem feels more robust (more blogs, SO threads, etc)
- Django has CMS (regular user can build their own pages)
- Django has an Admin out of the box (can add fields to models on the fly, maintain users, etc)

Useful Resources for Django CBV

https://docs.djangoproject.com/en/1.11/ref/class-based-views/generic-editing/#formview

https://docs.djangoproject.com/en/1.10/ref/class-based-views/flattened-index/#formview

https://ccbv.co.uk (views); https://cdf.9vo.lt (forms); http://www.cdrf.co (REST framework)

https://simpleisbetterthancomplex.com/series/2017/10/09/a-complete-beginners-guide-to-django-part-6.html

https://spapas.github.io/2018/03/19/comprehensive-django-cbv-guide/

I think I have a pretty good idea by now:

More readable version (not mine):
